

KA 4018-3.5 Screening Station

Powerful - Compact - Affordable

The KA 4018-3.5 is mounted on flexible system-foundation-blocks, so that the customer can individually choose the height. The drum is driven by an electric motor-gear unit with stepless (FC) speed regulation.

Feeding of the drum is either executed by a stationary bunker with a volume of 3,5 m³ and a FU-controlled conveyor belt.

An optional air separator, mounted on the discharge conveyor of the screening station, separates the light fraction and directs it into a special container before the screen overflow is recirculated into the rotting process.

Technical data

Driving system:

Hopper conveyor	0.75 kW
Screening drum	11.0 kW

electric

Sieve drum:

Driving system with endless drive chain	
Drum length	410 cm
Drum diameter	180 cm
Screen surface	22 m ²

Hopper:

Conveyor width	80 cm
Filling height	320 cm

3,5 m³

Capacity:

up to 60 m³/h

Options:

Discharge conveyor: 3.0 kW

Length	300 cm
Width	65 cm

Windsifter: 7.5 kW

Central lubrication

Magnetic separator

Wireless remote control
